Layer3
SYSTEMS

Network Performance Delivered

Celebrating

Over 25 Years of Layer3

Introduction

Layer3 Systems was formed in 1995 to develop computer **networks and systems,** in highly demanding, **high performance** environments.

The integration of the **Internet** with **technical** and **commercial** environments has given us the opportunity to design and develop many **leading** edge **systems** for a variety of renowned companies for over 25 years!

The Internet and the **low-cost** technology on which it is based provide a **ready platform** from which sophisticated and powerful systems can be developed.

We specialise in **leveraging** that technology and applying it to the working environment – usually generating a **cost saving** and increasing efficiency.

We count many **major companies** across a number of business sectors as our customers.

We work with many information technology companies that support our clients, **collaborating** in the development of powerful and cost **effective solutions,** capable of great performance and scalability.

We can provide:

- **Consultancy**
- **Services**
- **Products**

These three strands provide an overall package that can support business aims or projects that invariably require knowledge of:

- **Architecture**
- **Networking**
- **Technical Support**
- **Security**

If you would like more information or to discuss how we can help with Consultancy, Services or our Products please contact us on:

Consultancy

Layer3 Systems provides a cost efficient way to **implement** change. This may take the form of **developing** new systems, updating existing ones, or removing legacy equipment.

Our **experience** in a wide range of technical environments gives us the understanding to develop **secure, scalable, high performance, cost effective** solutions to suit even the most demanding environments.

Our list of **achievements** over the last 25 years includes a very broad range of **technical and commercial success.**

From handling the **systems integration** for a new **broadcaster**, through developing a **secure network** infrastructure for a multinational **media company**, to the development of software to **monitor** the operation of key components within a **major corporation.**

Our staff are **dedicated** engineers, technicians and systems people who see **achieving** our **customer's goals** as taken for granted. We excel at **delivering excellence** and never forget that it is your business that we are concerned with.

We are vendor neutral and always consider the right component for the job.

If you are considering carrying out any project, connecting together systems, or networks, for broadcast, or IT – then please talk to us.

If you would like more information or to discuss how we can help with Consultancy, Services or our Products please contact us on:

Services

Layer3 Systems has developed a wide range of services over the years. Some of these form a **natural** and logical **extension** to the consultancy work that we often carry out. Other services have developed from **listening** to our customers and their specific **requirements.** Naturally we offer support for the products we provide and full training for our customer's staff.

We can **develop** and deliver changes into your environment and we are also able to **maintain** those changes into the future.

Benefits include the ability to finely **specify** your requirements and therefore manage your costs, choosing the right level of service for your needs.

Services:

- **Network mapping**
- **Network configuration**
- **System documentation**
- **System hardening**
- **System configuration**
- **System integration**
- **System decommission**
- **Second line support**
- **Problem analysis**
- **System monitoring**
- **Software support for bespoke software**
- **Business Continuity**
- **Disaster Recovery**

The above services are just a short example of the range of items we cover.

Products

Layer3 Systems has developed a number of **software** and **hardware** devices over the years whilst also reselling very specific products that fit with our ethos and technical niche.

Our products provide a well thought out way to achieve the desired result; whether that is moving files between locations or monitoring remote devices. Our products are easy to deploy and require no day-to-day maintenance.
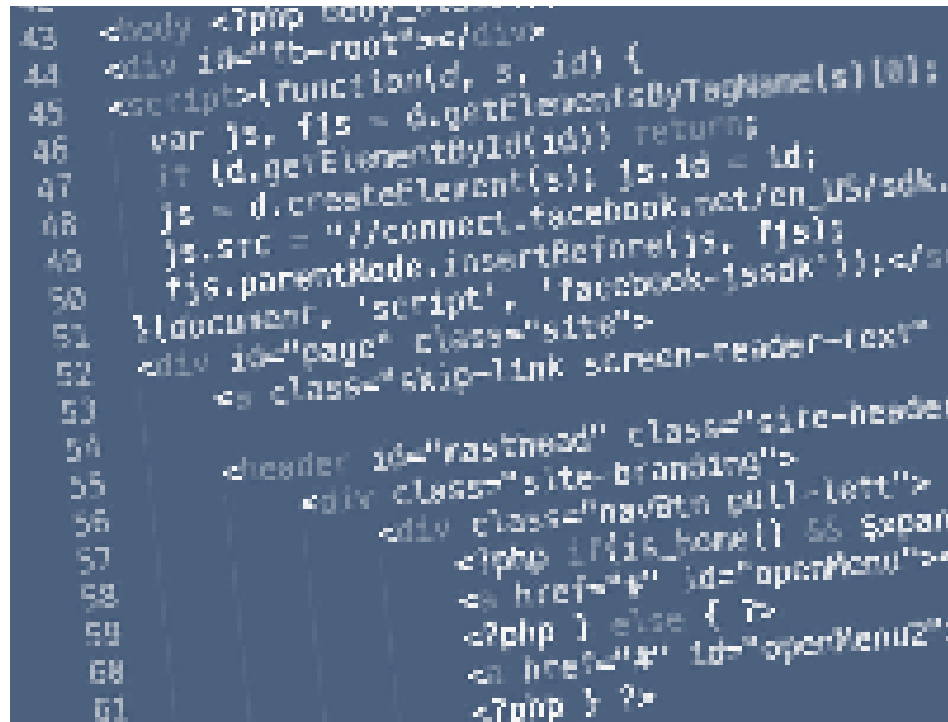

FTP-Poller:
The need to move files reliably between systems drove us to develop this file-moving automaton – it's so powerful it has even been used to detect faults in networks!

CustardWare:
CustardWare is a framework technology that allows us to tie together modular components that can examine configuration and operational metrics from networks and/or systems. In simple terms it uses SNMP (amongst other protocols) to gather information on the configuration and operation of network devices and systems.

IP Video Router:
The IP Video Router provides a powerful and flexible solution allowing multiple contributors (suppliers of content) to provide video streams to a subscriber (consumer of content). This is easily implemented as a physical device inside the subscribers network, or as a private or public cloud solution.

5

Customer Lists

Advent Communications
Kernel and system configuration for broadcast equipment control.

Bauer Media
LAN and VPN configuration and support.

Claimbase
LAN and VPN configuration and support.

Cura-IT
SNMP monitoring solution support.

DHL
Network Systems and Web Technology.

Digital View
Site configuration, network product development.

Discovery Networks Europe
Information Technology, Network design and support.

DMA-Media
Internet streaming media development.

Easynet Ltd
Network diagnostics.

Elstree Light and Power
Email architecture

Entryphone
E-commerce system design

Fastcrop/Primelocation
Web server performance analysis.

Flextech Television
Information Technology, Flextech Interactive.

Globix
Streaming media and distribution services design.

Hallingbury
Automated document handling.

Hewlett Packard
Technical Support, Mission Critical Systems, Special Projects.

ImageSys
Network support and development.

Kyte Group
Firewall + Network Support.

Large European Broadcasters
Information Technology, Networks, Corporate Planning, Radio, News and Current Affairs, Human Resources.

Mobiles.co.uk
High Availability Firewall and failover development.

Netbet Limited
Project management, software design and development.

NDS
System design.

Norwich Union
Security hardening.

Sun Microsystems
Automated systems configuration and system admin.

Sky
Systems integration.

SmashedAtom
Systems Architecture Team, interactive television design.

Strategy and Technology Limited
Development of SNMP support for broadcast products.

S4C
Automated file transfer.

Teachers'TV
Systems integration, network development, FTP-Poller, VPN implementation design and support.

Totally PLC
Network design and development.

Timeline TV
Network monitoring and diagnostics.

TV Travel Shop
Network monitoring and diagnostics.

United Assurance
Information Technology, Call Centre Systems, Workflow Systems.

Victoria Real
Project management.

Vodafone
Radio networks, Information Technology.

Wheel
Server integration design, update of legacy servers.

XTML
Business Critical Systems Team.

Yoomedia
Systems architecture design, implementation and support.
